AI MOCK-INTERVIEW PLATFORM

PanelPrep

The interview room, on demand.

Live · panel-prep.web.app

THE PROBLEM

Prep tools are flashcards. The interview is a live room.

Candidates rehearse against static question banks — read, memorize, repeat. None of it resembles the moment that actually decides the outcome.

- **Multiple interviewers, not one prompt**
  A panel probes from different angles at once.
- **Follow-up pressure**
  Every answer invites a harder question you can't script.
- **No pause button**
  You speak in real time — out loud, under the clock.

THE SOLUTION

A live AI interview panel that talks back.

Two named interviewers, two real voices

A lead and a peer with distinct personas — and two genuinely distinct spoken voices, not one narrator reading both parts.

Full-duplex, spoken, with barge-in

Native-audio conversation in real time. Interrupt, get interrupted, think out loud — the room never waits for a text box.

In your language

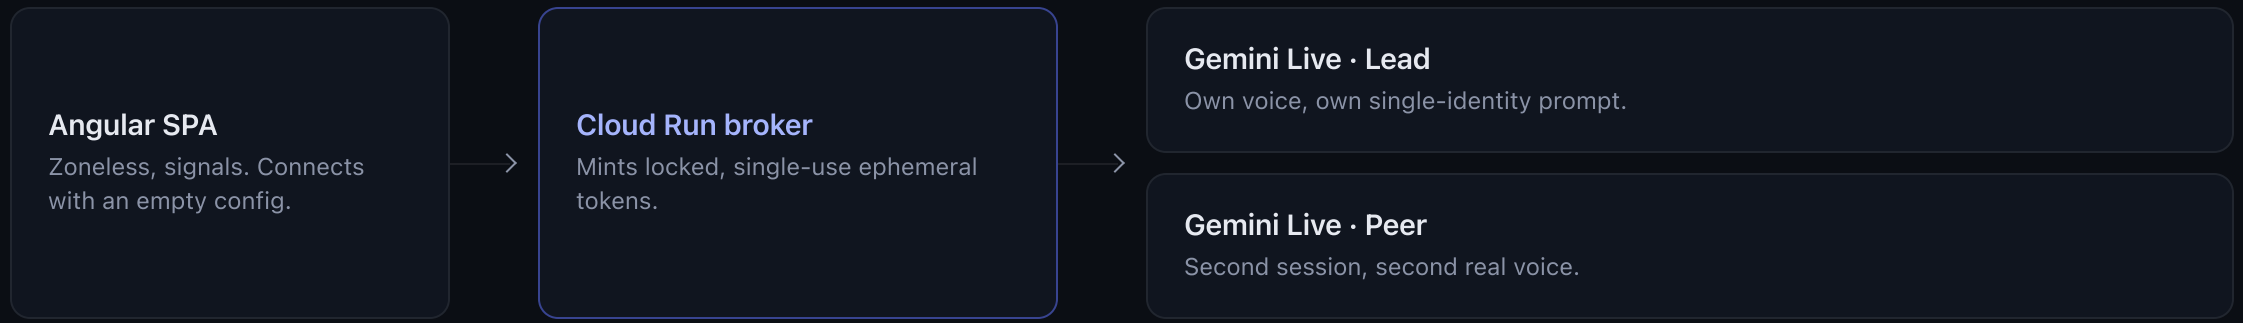

English, Hindi, Kannada, Spanish, or free-text. The whole interview runs in it; panelist names localize to match.

A scored rubric report after

Every session ends in a typed, rubric-anchored evaluation from a Gemini Pro judge — with an optional voice coach debrief.

HOW IT WORKS

One broker, locked tokens, two live sessions.

Firestore
Per-turn transcripts persisted live.

Gemini Pro evaluator
Typed JSON rubric report.

Company briefs
Google-Search-grounded, cached 14 days.

THE HARD PART

One Live session is locked to one voice.

So two voices means two sessions — and someone has to run the room. The client owns floor control; the model itself signals whose turn it is.

- One session per panelist
  Only the active chair receives mic audio.
- Turns via a hand_off tool call
  The model declares the handoff; the client moves the floor.
- Anti-ping-pong guards
  No handoff until the candidate has spoken since the last one.
- 1.5s mic-hold + 5s watchdog
  The room can never go dead or double-talk on a switch.
- Seamless auto-resume
  When the ~10-min socket drops, re-mint, reconnect, continue — no data lost.

SECURITY

The key never leaves the server. Neither do the prompts.

API key stays in Secret Manager

The Gemini key lives only server-side. The browser never holds a credential that could be lifted from a bundle.

Prompts + voices locked into the token

Compiled server-side and sealed into single-use ephemeral tokens via liveConnectConstraints — tamper-proof by construction.

Browser connects with an empty config

The client can't read or alter the system prompt. Verified: prompt strings are absent from the client bundle.

Firebase ID-token auth + rate limits

Every broker endpoint verifies a Firebase ID token via firebase-admin, with per-user rate limiting behind it.

PREP TRACK

A closed loop from job description to panel-ready.

01
Job description

05
One-click full panel

Report links back to the plan · every session updates per-skill scores · the loop closes on itself

TRACTION & DELIVERY

Shipped to production. Solo.

52
Merged PRs, end to end

Live
In production at panel-prep.web.app

4+
Languages + free-text, per interview

1
Builder — designed, built, shipped solo

Resume / JD tailoring

Multimodal parse of an uploaded resume or job description calibrates every question.

Admin ops & god mode

Cross-user drill-down, score overrides, user management, and impersonation — all server-enforced.

Mobile + enterprise redesign

Responsive throughout, restrained dark UI, journey-first home across two tracks.

STACK

All-Google, top to bottom.

FRONTEND

Angular 21
Zoneless, standalone, signals

Tailwind v4
Restrained dark design system

Firebase Hosting
SPA at panel-prep.web.app

BACKEND & DATA

Cloud Run broker
Token minting, evaluation, routing

Firebase Auth
Google sign-in, ID-token gating

Firestore
Per-turn transcripts, briefs cache

Secret Manager
Gemini key, server-only

AI MODELS

Gemini Live 3.1 flash
Native-audio panel voices

Gemini 3.1 Pro
Rubric evaluator

Gemini 2.5 flash
Parse, grounding, routing utilities
